GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Hyseq, Inc

TITLE OF INVENTION: NOVEL NUCLEIC ACIDS AND POLYPEPTIDES

FILE REFERENCE: 790C1P3/US

FULLE REFERENCE: 790C1P3/US

CURRENT APPLICATION NUMBER: US/10/450,763

CURRENT FILING DATE: 2003-06-11

PRIOR APPLICATION NUMBER: 09/540,217

PRIOR FILING DATE: 2000-03-31

PRIOR FILING DATE: 2000-03-31

PRIOR FILING DATE: 2000-08-23

NUMBER OF SEQ ID NOS: 60736

SOFTWARE: CUSCOM

SEQ ID NO 27357

LENGTH: 3782

TYPE: DNA

ORGANISM: Homo sapiens
FEATURE:
NAME/KEY: SIMILAR

LOCATION: (2200)...(2568)

OTHER INFORMATION: apotosis, accession number AF311388, Smith-Waterman Score=641.

FEATURE: NEORMATION: apotosis, accession number AF311388, Smith-Waterman Score=641.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                               Score

like proteins. The survivin-like DNA and protein sequences are useful in
diagnostics and screening compounds for treating various cancers and
apoptosis abnormality, including gene therapy. The present DNA sequence
encodes a survivin-like protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Baculovirus IAP repeat domain or RING-finger domain-containing survivin-like polypeptides and encoded DNAs, applicable in diagnosis and screenin compounds for treating various cancers and apoptosis abnormality.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ś
                                                     The present sequence encodes a human polypeptide, designated livin. Livin is an inhibitor of apoptosis protein 3 (IAP-3). Livin is present in certain cancer cell lines and prevents apoptosis. The livin polypeptide is useful for identifying compounds that inhibit and modulate livin function and activity. Such compounds that inhibit and modulate livin dysfunctional apoptosis condition. Livin polypeptides are useful as a source of probes and primers, and in gene therapy. Livin polypeptides and polymucleotides, their inhibitors and modulators are useful for treating pathophysiological disorders related to apoptosis, cancers, particularly melanoma cancer, Alzheimer's disease and Parkinson's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel livin polypeptides and polynucleotides useful for treat pathophysiological disorders related to apoptosis, cancers, per melanoma cancer, Alzheimer's disease and Parkinson's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim

                                                                                                                                                                                                                                                                                                                 The invention relates to an antisense oligonucleotide targeted to nucleic acid encoding Livin and that specifically hybridises with nucleic acid encoding Livin and inhibits expression of Livin. The antisense oligonucleotide is useful for preparing a composition for treating hyperproliferative disorder or aberrant apoptosis. The presquence represents human livin DNA.
                                                                                                                                                                                                                                                                                                                                                                                       New antisense oligonucleotide, having a sequence targeted to a nucleic acid encoding Livin, useful for preparing a composition for treating hyperproliferative disorder or aberrant apoptosis.

AC sample, where or a related derived, but invention relates to a method of screening for nucleic actd motecutes t show altered expression in a first cell sample comprising comparing gene expression profile of the sample with that of a second reference ple, where the first sample has been grown in the presence of butyrate a related carbon source from which butyrate is directly or indirectly the researce sample has not. The invention also relates to

> cc a method of detecting at least one nucleic acid molecule associated with cc comprising providing a biological sample comprising at least one cell to comprising providing a biological sample comprising at least one cell to comprising providizing cc detecting the presence of at least one molecule in the sample, a method cc and/or progression of colorectal cancer in an animal comprising providizing cc and/or progression of colorectal cancer in an animal comprising providing cc and/or progression of colorectal cancer in an animal comprising providing cc the sample with at least one polypeptide associated with the initiation cc the sample with at least one ligand that specifically binds at least one can amino acid sequence which varies by the addition, delection or comprising providing the presence of the polypeptide on a propertied and detecting the presence of the polypeptide of a concercial concerci

The present invention describes an isolated nucleic acid molecule, which CC comprises the sequence of any of the genes that are up-regulated or down-CC regulated in specific cancers (e.g. about 1031 genes up-regulated in CC acute lymphocytic leukemia). ACC72641 to ACC72880 represent cancer CC acute lymphocytic leukemia). ACC72641 to ACC72880 represent cancer CC absence of a pathological cell in a patient; (2) an expression vector CC absence of a pathological cell in a patient; (2) an expression vector CC comprising a nucleic acid molecule described above; (3) a host cell CC comprising the vector; (4) an isolated polypeptide, which is encoded by CC the nucleic acid; (5) an antibody that specifically binds the polypeptide of (4); (6) specifically targeting a compound to a pathological cell in a CC patient by administering to the patient the antibody above; and (7) a CC drug screening assay. The nucleic acid is useful as diagnostic markers or therapeutic targets. In particular, the nucleic acid is useful for the patient by administering to the patient the antibody above; and (7) a CC diagnosing a pathology, e.g. cancer (e.g. cancer of the bone marrow, CC bladder, brain, breast, cervix, colon/rectum, kidney, lung, ovary, CC pancreas, prostate, skin and uterus), wounds, ischaemia, heart diseases, atherosclerosis and endometriosis. The nucleic acid is also useful in CC capthologies.

                The present invention relates to a DNA vaccine effective for eliciting an immune response against cancer cells which comprises a DNA construct operably encoding at least one cancer-associated Inhibitor of Apoptosis-family protein (IAP-family protein) and at least one immunoactive gene product in a pharmaceutical carrier. The invention is useful for treating cancer such as lung cancer, colorectal cancer and melanoma. The present sequence is the human livin beta splice variant DNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence encodes a human polypeptide, designated livin. Livin is an inhibitor of apoptosis protein 3 (IAP-3). Livin is present in certain cancer cell lines and prevents apoptosis. The livin polypeptide is useful for identifying compounds that inhibit and modulate livin function and activity. Such compounds are useful in the treatment of a dysfunctional apoptosis condition. Livin polypeptides are useful as a source of probes and primers, and in gene therapy. Livin polypeptides and polynucleotides, their inhibitors and modulators are useful for treating pathophysiological disorders related to apoptosis, cancers, particularly melanoma cancer, Alzheimer's disease and Parkinson's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel livin polypeptides and polynucleotides useful for treating pathophysiological disorders related to apoptosis, cancers, particularly melanoma cancer, Alzheimer's disease and Parkinson's disease e.g. by gen
